

2022 Autumn Bull Sale

**Monday 14th February 2022
12.30pm at our Naracoorte Complex**

 **AuctionsPlus**

STONEY POINT PERFORMANCE ANGUS

11 PLUS PROFIT ASSURANCE

AVERAGE EBV'S EXCEEDED ANGUS BREED

Many of the sale bulls are indexing in top 1% of Angus breed. Using Stoney Point bulls will make sure your herd is right up there for all the critical performance traits, however, we do not compromise on phenotype. All bulls must be structurally sound.

BULLS ZOETIS i50K TESTED

This Genomic enhancing test on bulls where indicated using individual DNA provides extra certainty to the figures of the bull you purchase. It also means they are parent verified and the DNA figures confirm we are ahead of breed average.

BULLS SIRE VERIFIED

STONEY POINT 6 POINT HEALTH ASSURANCE

Surpasses Zoetis 5 Star breeder program.

ACCURATE AND INDEPENDENT MEASURING

All non visual traits are accurately and independently measured by recognised experts.

SEMEN TESTED

To ensure live sperm are delivered, we have semen tested all bulls and only those with more than adequate motility are being offered.

STRUCTURALLY ASSESSED BY INDEPENDENT EXPERTS

Dick Whale has structurally assessed all bulls in the sale.

REPLACEMENT WHERE STRUCTURALLY UNSOUND, INFERTILE OR INCAPABLE OF SERVICE – 1 YEAR BREEDING SEASON GUARANTEE

Any such bull that will be replaced or refunded providing no causal agents post leaving the Stoney Point Performance Angus property.

DEATH COVER

All bulls are insured for death including transit until 15th March 2022 and the insurance can be continued by the purchaser. Your investment is protected.

ANGUS AUSTRALIA

Our Sale Lot catalogue is prepared by Angus Australia. You can be ensured of the accuracy and truth of the figures.

PROVEN

Feedback confirms that Stoney Point Bulls DO and STAY!

Bulls that DO – Bulls that STAY

WELCOME

With the cattle job at an all-time high, the bull line up at **Stoney Point Performance Angus** this year is sure to impress with unfaltering type and value for money.

We truly believe that the bulls are more consistent, bred and raised predominantly on grass to perform and are more market relevant than ever.

Our relentless pursuit of excellence is paying off in both the paddock and on the plate, with excellent reports coming in from our clientele and a very successful stage 1 female dispersal held in March of last year proving that our cow herd is highly desirable and amongst the elite herds in the nation.

This year's sires include Sydgen Enhance, Chiltern Park Moe M6, Baldrige Beast Mode B074, Glenoch-JK Makahu M602, Pathfinder Komplete K22, SS Niagara Z29, Booroomooka Genius G120, Wattletop Franklin G188 and home-grown legends Momentum M07 and Lovis L178.

We look forward to seeing you at our 2022 field day on the 7th February and our 2022 Autumn Bull sale on 14th February, both at the Naracoorte Sale Complex, sale to be interfaced with ***Auctions Plus***.

Also announcing stage 2 of our female herd dispersal will be on the 29th and 30th of March 2022, all Q and R Drop Females PTIC and a selection of registered PTIC recip's, mixed age cows, former donors and S weaner heifer calves will be on offer.

Bulls that DO – Bulls that STAY

SALE INFORMATION

Selling System

Sale will be conducted under auction conditions as posted by the Agents on the day. Selling price will not include GST.

Accommodation

NARACOORTE SALE:

Naracoorte Hotel/Motel (08) 8762 2400

Country Roads Motor Inn (08) 8762 3900

Naracoorte Cottages 0408 810 645

For any other accommodation or travel assistance please contact Peter Colliver 0428 723 640.

AM – NH – CA – DD

All bulls selling are either free of these defects by parentage, or have been tested free. No carrier bulls will be offered for sale.

Johnes Status – the Stoney Point herd is JBAS6.

Delivery

Stoney Point Performance Angus offers free delivery to buyers within a 500km radius of the sale location. Delivery will be co-ordinated immediately after the sale, Any testing requirements for interstate travel, will be at the purchaser's expense. Buyers wishing express delivery of their purchases are encouraged to use their own carriers. All bulls are purchasers risk from the fall of the hammer. Freight assistance is given to those outside the 500km radius, speak to Peter 0428 723 640 for more details.

Registration Status

All bulls selling are either Herd Book Registered (HBR) or Angus Performance Registered (APR) and can be transferred at no cost.

Inspections

Bulls can be inspected from 2 hours before sale. We encourage buyers to inspect the bulls prior to sale. This gives us the opportunity to assist in selection of genetics to best fit your herd.

Rebates

A rebate of 3% is allowed to agents nominating and accompanying buyers to the sale. Agents not meeting the above terms will receive 1% if settling for a client.

Phone Bidding

Phone bidding can be arranged prior to the sale by speaking to the selling agents.

Buyers Instructions

No buyers instruction form is included in the catalogue. Sale Agents prefer their own "Buyers Instructions" cards. All purchasers must complete one of these cards prior to leaving the sale. No verbal instructions will be accepted.

Catering

Refreshments will be available throughout the sale, and we would also like to invite all cattle producers for lunch and get together.

After Sales Service

We offer ongoing support to our clients. All at Stoney Point Performance Angus are available to discuss any aspect of your herd and can be contacted on the numbers listed in this catalogue.

INSURANCE

Bulls are insured for death, including transit, until 15th March 2022

Bulls that DO – Bulls that STAY

OUR BREEDING PHILOSOPHY

Many Studs wax lyrical, use big words from the text book to describe their Breeding Philosophy. It can be long winded and hard to grasp.

At Stoney Point we keep it simple:

We breed bulls that **DO**
We breed bulls that **STAY**

BULLS THAT DO deliver the genetics to your herd that:

- Ensures your cows get in calf, then calve down unassisted, raise a calf that grows and grows producing lots of high quality meat and both the bull and cows remain healthy and fertile.
- Produce a no nonsense docile herd whose offspring are sought by feedlotter and processors.

BULLS THAT STAY or are durable ensures your purchased bull:

- Possesses structural soundness with great feet and legs and superb udders in his female offspring.
- Retains his softness, style and shape and breeds to type.
- Is a great all round performer – ticks all the boxes.

It is all about breeding Real Angus – like they should be, loaded with **Superior Fertility and Capability** ensuring our clients herds are efficient, producing the highest quality meat.

Bulls that DO – Bulls that STAY

ST VALENTINES DAY

Our bull sale this year is being held on St Valentine's Day.

Originally the day was to honour the Christian martyr St Valentine who died in AD 269. Pope Gelasius in AD 496 introduced the concept of celebrating his death on 14th of February each year.

Today Valentines Day has become a very commercial celebration of romance and love.

In the US alone \$20 billion is expended for the day.

The associated symbols are flowers (red roses), chocolates and cards containing generally anonymous expressions of love and affection.

So the Stoney Point Bulls await their Valentines, the cows in your herd.

They have all received their cards from them with a line taken from Shakespeare's Hamlet:

"And I a maid (aka cow) at your window, to be your Valentine"

Don't disappoint your cows.

Bulls that DO – Bulls that STAY

Important Notice for Purchasers

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following ident's.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
